

## Well Water Supply Residential Development/ Industrial Applications

Complete Water Services is fully capable and experienced in locating and developing groundwater sources for drinking water or process water supply. This can be a critical resource in areas not served by municipal supplies, or as a contingency supply should there be an interruption in municipal water service. In either case, developing and controlling your own water supply can reduce risk and save money.

### Services include:

- Hydrogeological Assessment
- Well Location
- Well Development Project Management
- Permitting
- Design/Build of Storage and Treatment Facilities
- Design of Distribution or Tie-in to Existing Distribution System

### Reference Projects:

#### UAHC Camp Coleman, Cleveland, GA

This is a 250 acre recreation area, drawing visitors from around the world. The site includes a 20 acre lake, about 30 family cottages, dining facility, infirmary, etc. Complete Water Services assisted in the design and installation of a groundwater well and treatment system to supply the Camp with drinking and domestic water. Treatment includes sediment filtration, iron and manganese removal, pH adjustment and microbiological control. Services also included preparation of an OEM Manual and plant startup.

#### The Estates at Hawks Landing, Oglethorpe County, GA

This residential development is located in an area which is not served by municipal water. Complete Water Services located and developed a well system, designed and installed a drinking water treatment system including iron and manganese removal and microbiological control, and designed and installed pumps and piping to tie into an existing distribution system.
